The wrapping material is made from a synthetic resin sheet equipped with self-attaching property tightly and is wound in such a way that its end portions overlap each other in the direction around the axis of the air bag folded up into approximately a rod shape, and the folded-up condition of the air bag is maintained by means of tight attachment of the overlapping portions to each other.
2. German Patent Application No. DE 29916177 U1, published March 30, 2000 discloses: a connection between an airbag and an inflator including a clamp for holding the connection in place.
